1. The following is an examiner's statement of reasons for allowance: prior art fails to teach or suggest an image processing apparatus, a method and a computer readable memory for inputting a first image of a face of a person to be recognized using a first camera, inputting a second image of the face of the person using a second camera, detecting a face area from the first image, deciding whether the second image is a frontal face of the person by referring to the face area, detecting a state of open eyes from the face area, and outputting the second image inputted while the second image is decided to be the frontal face and the state of open eyes is detected, wherein a direction from a view position of the second camera to a center position of the face of the person is a facial front direction, and wherein a view position of the first camera is located lower than a position of the face of the person, and a direction of the optical axis of the first camera represents an angle of elevation from a horizontal direction.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Claims 12-16, 20, and 24 are allowed.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yamamoto is cited because the reference teaches a face-image processing apparatus which determines opening/closing of the eyes.

Ohki is cited because the reference teaches stereo camera system serving as a three-dimensional position detecting device where plurality of camera is used to determine position in the three dimensional space.
